

A Revolutionary Solution to Odor Control and Dust Suppression

Innovative engineering design from Probe Industries has resulted in the creation of the most efficient solution available for Odor and Dust Suppression.. The Probe Rotary Atomizer uses a revolutionary misting system that is more powerful and efficient than existing nozzle-based systems.. Whereas nozzles can become blocked the Probe Rotary Atomizer uses two opposing meshes that slice up the water into tiny droplets..The result is No Blockages and Droplets at an Optimum uniform size to suppress Odor and Dust even in the most challenging environments.. Already being used in a range of Industrial and Utility businesses World Wide the Probe Rotary Atomizer is providing Cost Effective Solutions and a Wide Range of Benefits thought to be unattainable until now..

Each Unit can cover an impressive 90 feet of distance, Oscillator Feature (optional) provides a 180 degree arc covering 4500 square feet per unit which means a Single Rotary Atomizer can do the work of several hundred nozzle misters..

Although using leading edge technology the Probe Rotary Atomizer is simple to use, installed in minutes, and requires very little or no maintenance..

By producing optimum droplet size the Probe Rotary Atomizer uses less water than nozzles and with No High Pressure Pumps necessary Rotary Atomizers are Energy Efficient..

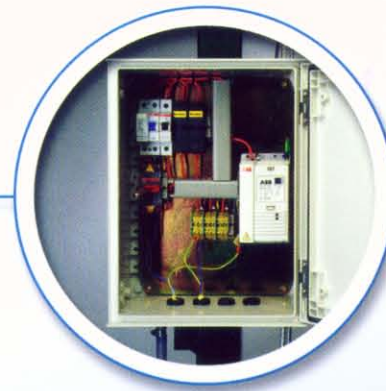

Each Rotary Atomizer is compatible with 110V or 220V..Rotary Atomizers provide flexibility to operate separate or in conjunction with multiple] units in Specific Designated Locations.. Units can be fitted with environmental controls..

The Brilliance of Probe Rotary Atomizers system is in the atomizing head itself..It works by pumping water through two opposing meshes spinning at 12,000 RPM, which pulverizes the liquid into an incredible 238 billion droplets per gallon..The droplets are Mono-Dispersed (uniform size) at a carefully computed size enabling the to

Rotary Atomizers provide the flexibility, cost-effective solutions, efficiency, and superior engineering..Rotary Atomizers provide Solutions including the ability to introduce Organic Compounds necessary for optimum Dust Suppression Pest and Odor Control..

Standard Flow Meter allows users Instant Water Flow adjustments ranging from 1 to 50 GPH.. Incredibly the Units can leave the ground either dry or wet. Working effectively in environments as diverse as manufacturing C&D processing, MSW Transfer Station Landfills, Water Treatment Plants,
