SpaceVac High-Level Cleaning Systems
External Cleaning System: Product Guide

Exterior Cleaning System

The SpaceVac External high-level cleaning system is a revolution in high-level cleaning.

Offering 16m of reach, the system gives operators the ability to clean blocked gutters, downpipes and hoppers, quickly and efficiently from the safety of the ground floor.

Our lightweight interlocking cleaning poles, are made from a durable yet super lightweight carbon fibre and glass composite material, to withstanding heavy duty work in the toughest of environments.

A Decade of Innovation:

The SpaceVac External Cleaning system is comprised of four distinct parts:

The first of these is a **unique hose adaptor** which securely fastens the vacuum hose to the base of the cleaning poles.

Once the hose is connected, the core of the SpaceVac system - our **interlocking 50mm cleaning poles** - are added to the desired height. These lightweight poles combine up to a total height of 10.4 metres with a standard kit, but can be added to, combining to a total height of 16m from the safety of the ground floor.

We use 50mm poles for our external cleaning system as the wider pole allows for greater airflow and less blockages when clearing heavy duty debris from height.

The third part of the SpaceVac system is our selection of **durable lightweight cleaning heads**. These uniquely shaped aluminium heads offer operator a unique range of angles for cleaning over and

around obstacles.

Attaching to our cleaning heads is a set of heavy duty, industrial grade tools to clear blocked guttering - made of stainless steel to offer maximum durability.

Finally, the SpaceVac external cleaning system comes with an innovative **wireless camera and monitoring system** - to allow operators to view the progress of cleaning in real time from the safety of the ground floor and even evidence progress for clients.

As if all of this innovation wasn't enough, all of SpaceVac's cleaning poles, heads, brushes and tools feature our unique **safety locking mechanism** for total operator safety. Designed to ensure the system does not separate during operation - this development is just the latest innovation in the development of SpaceVac.

Benefits of SpaceVac:

Flexible solution: Diverse range of heads and tools for guttering, hoppers and downpipes.

Durable Aluminium Heads: Built to last with a range of stainless steel tools to stand up to the toughest challenges.

Clean **faster** than traditional methods by cleaning from the ground floor - minimise operational downtime - crucial in high traffic areas such as pavements.

Small operational footprint; requires much smaller space than cherry picker or scaffolding to deploy.

Safer than cleaning from height - no risk of the falls associated with cleaning from ladders or scaffolding.

Innovative camera solution to evidence cleans and monitor progress from the safety of the ground floor in real time.

Designed for total operator safety with unique safety locking mechanism to ensure no separation or slippage during operation.

Lightweight but robust cleaning poles are easy to use but can withstand the toughest challenges.

Versatile - adapt our external system for internal use with a 50mm to 38mm pole adaptor kit.

But dont just take our word for it!!

@SpaceVacDM

Whats Included:

Pole Kit:

6 x 1.6m 50mm Carbon Fibre Poles
Padded pole bag

Head Kit:

1 x 135 degree High grade aluminium cleaning head
4 x Stainless steel cleaning tools

Hose Kit:

7.5m 50mm hose & hose bag
Hose to Vac Adaptor
Hose to pole Adapter

Camera Kit:

Wireless camera & clip
Wireless monitor and clip
Camera bag

Some of our clients include...

Coca-Cola

Carlsberg

sodexo

TESCO

Gatwick

Tesco, UK

As one of the biggest property owners in the UK, Tesco has a huge nationwide estate of buildings of all shapes and sizes, in a range of locations and environments.

One of the things that these stores all share in common though, is the need to keep their gutters and downpipes clear of blockages and dirt.

With our lightweight interlocking 50mm poles, durable range of tools and heads, we were the perfect solution to a perennial problem for facilities managers.

After trialling SpaceVac in a limited number of stores, SpaceVac were invited to Tesco's annual safety day to pitch the product to cleaning and facilities teams and meet the team across the wider UK operation.

Following successful feedback from the event and the stores involved in

the trial period, Tesco placed a large order of SpaceVac's external cleaning system to deploy to their in-house facilities management teams across the UK.

These systems were rolled out to the Tesco property estate throughout 2017 across the entirety of the UK.

This rollout was fully supported by a nationwide training program delivered by SpaceVac's in house team of dedicated cleaning professionals.

The SpaceVac team worked with Facilities colleagues on the ground to deliver extensive training on the correct deployment of SpaceVac, to ensure the systems successful implementation as part of the companies statutory facilities management.

Through 2018, SpaceVac will now be working with the team to deliver a matching implementation of our market leading Internal cleaning system.
