Englo Wet Dust Extraction Technology

Combustible Dust • Moisture • Hi-Temp

Difficult operating conditions such as combustible dust, moisture, or high temperature conditions create problems for dry dust collection systems such as fabric filter or cartridge collectors.

Engart Global systems are operating at hundreds of mining and non-mining locations worldwide. This includes a wide variety of surface and underground mining and processing operations including gold, limestone, silver, potash, gypsum, coal, and others.

The largest application of Engart technology has been for handling combustible coal dust at power plants and mines. These installations operate at applications including conveyor transfers, tripper rooms, crusher buildings and reclaim tunnels.

EMI Controls Misting Cannons

EMI Controls misting cannons project long range fine spray mist for dust and odor control applications such as demolition, recycling and composting, storage, mines, loadout, mines, quarries, tunneling, water and waste treatment facilities, landfills and other large areas.

Model V22 features 360 degree mist spray to 90 meters, variable inclination, remote control operation and patented nozzle head.

SCHWING BIOSET DEWATERING SCREW PRESS SYSTEMS

FULLY AUTOMATED DEWATERING SYSTEM

Schwing Bioset screw press dewatering systems are used in water, wastewater, mining and industrial applications.

- Low speeds and automated control
- Long lifespan
- High performance screen design
- Low power required
- Low maintenance
- Fifteen models available

SCHWING BIOSET MINING PUMP SYSTEMS

Heavy Duty Mining Pump Systems

Schwing Mining Pumps operate at hundreds of successful installations and deliver the performance you need for the harshest operating conditions on the planet.

- Based on the same technology used to pump concrete.
- Used for tailings disposal for surface and underground applications.
- Positive displacement design
- Wear resistant operation
- Horizontal or vertical operation

ADI AIR DYNAMICS INDUSTRIES

CERAMIC LINED COAL TRANSFER CHUTE

ADI Air Dynamics Industries, an Englo Inc. affiliated company, designs, builds and installs custom metal fabrications and process ventilation ductwork for heavy industrial and mining operations.

ADI supervisors and craftsmen have the experience, knowledge and skills to deliver quality manufacturing standards that are the highest in the fabrication industry.

SPACEVAC HIGH-LEVEL CLEANING SYSTEM

SPACEVAC INTERIOR HIGH-LEVEL
ATEX/DIV II VACUUM TOOLS

SAFER DUST CONTROL

SpaceVac ATEX/DIV II System

Combustible Dust Vacuum Cleaning Tools

Patented worldwide, SpaceVac is the first system of its kind to be certified safe for use in specialist explosive atmospheres.

Unique hose adapter, anti-static vacuum hose and AX brushes, carbon conductive interlocking ATEX lightweight poles and our unique Safety Locking Mechanism for total operator safety during operation.

SPACEVAC EXTERIOR HIGH-LEVEL
VACUUM TOOLS

POLE MOUNTED VIDEO CAMERA AND
MONITOR PERMIT VIEWING OF WORK

Durable • Lightweight • Safe

Reach 35' or higher and clean faster than traditional methods by working from the ground floor. Work safer by eliminating the risk of ladders, lifts and scaffolding.

OPTIMAL FILTRATION DEWATERING BELT FILTER

Optimal DBG Industrial Filtration Solution®

Patented continuous loop dewatering belt media operates without requiring a fabric filter material.

Continuously filters fine particulates in dirty liquid solutions for solid recovery and liquid recirculation.

Eliminates costly filter change outs.

Revolutionary liquid/solid separator dewateres coal dust and other ultrafine particulate with our patented continuous loop belt. No Filter Change Required.

AIROPURE ODOR DESTRUCTIVE REAGENT

AiroPure ODR Odor Destructive Reagent destroys odor at the molecular level. Odors from hydrogen sulphide, organic sulphur, nitrogen compounds, methyl mercaptan, ammonia, trimethylamine.

AiroPure also inhibits the growth of gram positive and gram negative bacteria such as Legionella, E Coli, MRCS, CDIFF, Listeria and more.

PROBE AMERICA ATOMIZER MISTING FANS

Probe America Rotary Atomizer misting fans offer a better solution for dust and odor control. The Probe Atomizer features injection of low pressure water into a unique high RPM rotating mesh basket screen mounted in front of the powerful Probe fan. The atomizer produces an extremely fine mist for dust control, odor control, cooling and humidification that is sprayed out to 90 feet by the Probe fan.

- Misting Spray to 90 Feet
- No High Pressure Nozzles
- No High Pressure Pumps
- Water Volume, 0 - 50 GPH

Safer Dust Control!

Process Ventilation Solutions for Combustible Dust Hazards

[Contact Us](#)

Looking for better solutions for dust and odor control problems?

We Can Help!

Finn Equipment Sales Inc. and **Englo Inc** provide turnkey design, supply and installation of process ventilation technology for power, mining, tunneling, foundry, recycling and other heavy industrial operations. We are also able to provide custom metal fabrication of chutes, platforms, machinery parts and ductwork; design and supply of auxiliary ventilation and custom fans for mining and tunneling; mining pumps and screw press dewatering systems, dust and odor control misting fans; misting cannons; and AiroPure odor destructive reagent.

Thanks for taking time to review our capabilities. We are looking forward to learning about your project and product needs. Call or email whenever we can be of service.
